## Commentary

Trades were carried out on the Interconnectors in the early morning for negative reserve. 336MW of STOR was run for the darkness peak. ROCOF issues were solved via trades on the Interconnectors and a BM unit in addition to a small number of BM actions. Trades and BM actions were taken to solve power flow restrictions due to planned outages in North of Scotland and on the network boundary between England and Scotland. SO-SO Trade was instigated by a third party for 500MW for settlement periods 35-36. Overnight the voltage levels were regulated with a mix of trades and BM actions.
