Commentary

The market was prevalently short throughout the 24 hours. Up to 200MW of STOR were used over the darkness peak to account for wind generation shortfall. Overnight a mix of trades and BM actions were taken to manage the voltage levels in many parts of England. Extra BM actions were taken for most of the day in Scotland for system security. Trades were also taken to solve voltage constraints in south of Scotland. RoCoF was managed with trades on interconnectors and on generating units, with the support of BM actions.
