BSUoS Charge Estimate: £1.34/MWh
Total Outurn: £1.98m

Daily Balancing Costs

■ BM Cost (Indicative)
■ AS Cost (Estimate)

Western Link status: Unavailable

Commentary

The market was mixed throughout the 24 hours. STOR in excess of 360MW was run over the morning peak, to account for a demand forecast error over a period of short market. Between the afternoon and the late evening multiple trades on the interconnectors were taken for positive margin. Additional dynamic response was held overnight for general frequency performance risk, during the morning for interconnector swing and for the rest of the day for demand uncertainty.

Between the afternoon and the evening, some BM actions and trades were taken to solve power flow restrictions on the network boundary between England and Scotland and in Scotland. RoCoF was secured overnight with trades and BM actions.
