

Trans-European Replacement Reserve Exchange (TERRE) Invitation to participate in testing 13 January 2020

In 2019, we launched:

- Our new externally hosted data concentrator for operational metering, live since October
- Wider Access (WA) to the GB Balancing Mechanism, live since December

You may also be interested in the Trans-European Replacement Reserve Exchange (TERRE) industry project.

European Replacement Reserve market

In compliance with European Network Codes (ENC), the system and process changes that we have made to enable WA will also facilitate access to the new European Replacement Reserve (RR) market. This is being established by the TERRE industry project. Following approval from Ofgem for our request or 'derogation' to delay GB facilitation of the RR market, Go-live is now scheduled for 30 June 2020.

System testing

If you are interested in participating in the RR market, we would like to invite you to participate in system testing. We propose to conduct testing in the following stages:

1. RR EDT submission testing
2. Market testing

Your participation

In order to participate, we will need you to:

1. Be able to submit data using an existing EDT connection or through the new WA Application Programming Interface (API)
2. Comply with the [EDT specification](#) for submission of RR data
3. Comply with the [RR implementation guidelines](#)

You can find more information on the NGENSO website, on the RR and ENC pages.

Do get in touch

To confirm your interest in testing, please reply to this email. Please check with your colleagues as they may have also received this invitation, which has been sent out on 'blind copy' to a number of companies.

We will accept confirmation of interest on a 'first come, first served' basis until we have a suitably sized pool of testers.

We hope you will take this opportunity to work with us, and we look forward to hearing from you.

If you have any general queries about Wider Access or TERRE, please send an email to Commercial.Operation@nationalgrideso.com.
