

Code Administrator Meeting Summary

CMP317 Identification and exclusion of Assets Required for Connection when setting Generator Transmission Network Use of System (TNUoS) charges And CMP327 Removing the Generator Residual from TNUoS Charges

Date: 15 April 2020

Contact Details

Chair: Rob Marshall, National Grid ESO

Rob.Marshall@nationalgrideso.com
07824 518958

Proposer: Jon Wisdom, National Grid ESO

Jon.Wisdom@nationalgrideso.com

Key areas of discussion

The Workgroup discussed the following:

- Discussions continued around interactions between this modification and, P396, a BSC modification. Ofgem had previously highlighted that in their opinion, BSC charges do not interact with the limiting regulation.
- The Workgroup explored frameworks for potential options around whether certain costs should be included.
- Workgroup members discussed whether targeting zero could potentially negate issues around BSC and BSUoS charges being included in the calculation of charges in regards to the limiting range. There was agreement between some workgroup members that this was a potential way forwards that would be complaint, however some members questioned whether this was the correct course of action to take.
- In order to make clear the potential next steps, the workgroup requested that the chair of the modification writes to Ofgem to request clarity around their decision on BSC modification P396. The workgroup also noted concerns put forwards by Energy UK to this regard.
- Members also noted that CMP339 would need to be considered, and a workgroup will be arranged in order to address this change.
- The workgroup reviewed legal text put forwards by the proposer.
