<b>Respondent name:</b>	Graz Macdonald
<b>Company name:</b>	Viridis Power
<b>Email address:</b>	Graz@viridispower.co.uk
<b>Phone number:</b>	020 3876 5180

**For reference the applicable CUSC objectives are:**

- a. *That compliance with the use of system charging methodology facilitates effective competition in the generation and supply of electricity and (so far as is consistent therewith) facilitates competition in the sale, distribution and purchase of electricity;*
- b. *That compliance with the use of system charging methodology results in charges which reflect, as far as is reasonably practicable, the costs (excluding any payments between transmission licensees which are made under and accordance with the STC) incurred by transmission licensees in their transmission businesses and which are compatible with standard licence condition C26 requirements of a connect and manage connection);*
- c. *That, so far as is consistent with sub-paragraphs (a) and (b), the use of system charging methodology, as far as is reasonably practicable, properly takes account of the developments in transmission licensees' transmission businesses;*
- d. *Compliance with the Electricity Regulation and any relevant legally binding decision of the European Commission and/or the Agency. These are defined within the National Grid Electricity Transmission plc Licence under Standard Condition C10, paragraph 1\*; and*
- e. *Promoting efficiency in the implementation and administration of the use of system charging methodology.*

*\*Objective (d) refers specifically to European Regulation 2009/714/EC. Reference to the Agency is to the Agency for the Cooperation of Energy Regulators (ACER).*

Please express your views in the right-hand side of the table below, including your rationale.

Standard Code Administrator Consultation questions		
1	Do you believe that the CMP350 Original solution, WACM1, WACM2, WACM3, WACM4, WACM5, WACM6 or WACM7 better facilitates the Applicable CUSC Objectives?	None of these are better than the baseline. They are anti-competitive and distortive (objective (a)), shifting costs and losses between time and parties including consumers.  WACM3 is the least worst as it has the smallest distortive impact.
2	Do you support the proposed implementation approach?	The approach is fine, though we disagree that any should be implemented.
3	Do you have any other comments?	We do not believe the defect this mod is addressing is actually even a defect – how is supplier tariff-setting strategy a CUSC issue? We also note that demand has increased significantly since the beginning of lockdown, and much of the system costs are due more to high renewable output rather than low demand and further that system costs due to high renewables have been trending upwards for years.
