

**CUSC Code Administrator Consultation Responses Summary****CMP333 ' BSUoS – Charging Supplier Users on gross demand (TCR)'****Four responses received****Standard Workgroup Consultation questions**

1	Do you believe that the CMP333 Original Proposal better facilitates the Applicable CUSC Objectives?	All respondents were supportive of the CMP333 change.
2	Do you support the proposed implementation approach?	<p>One respondent didn't agree to the proposed implementation.</p> <p>Some concerns were raised around the following:</p> <ul style="list-style-type: none"> <li>• system changes and cost implications on industry not being clear;</li> <li>• alignment of BSUoS and TNUoS Residual reforms for Generators not happening; and</li> <li>• 'scattered approach' to implementing changes to BSUoS charging occurring.</li> </ul>
3	Do you have any other comments?	One respondent stated that this Modification would disadvantage Suppliers, due to the way BSUoS is calculated under the currently enforced Price Caps. To correct this, the energy losses used for the BSUoS charge in the methodology for the (three) Price Caps should be corrected (increased) to reflect the change in units of energy on which we shall be charged BSUoS.
