<b>Company name:</b>	Neven Point Wind Ltd
<b>Email address:</b>	dennis@researchrelay.com
<b>Phone number:</b>	07739392965

**For reference the applicable CUSC objectives are:**

- a. *That compliance with the use of system charging methodology facilitates effective competition in the generation and supply of electricity and (so far as is consistent therewith) facilitates competition in the sale, distribution and purchase of electricity;*
- b. *That compliance with the use of system charging methodology results in charges which reflect, as far as is reasonably practicable, the costs (excluding any payments between transmission licensees which are made under and accordance with the STC) incurred by transmission licensees in their transmission businesses and which are compatible with standard licence condition C26 requirements of a connect and manage connection);*
- c. *That, so far as is consistent with sub-paragraphs (a) and (b), the use of system charging methodology, as far as is reasonably practicable, properly takes account of the developments in transmission licensees' transmission businesses;*
- d. *Compliance with the Electricity Regulation and any relevant legally binding decision of the European Commission and/or the Agency. These are defined within the National Grid Electricity Transmission plc Licence under Standard Condition C10, paragraph 1 \*; and*
- e. *Promoting efficiency in the implementation and administration of the use of the system charging methodology.*

*\*Objective (d) refers specifically to European Regulation 2009/714/EC. Reference to the Agency is to the Agency for the Cooperation of Energy Regulators (ACER).*

**Please express your views in the right-hand side of the table below, including your rationale.**

Standard Code Administrator Consultation questions		
1	Do you believe that CMP353 Original solution better facilitates the Applicable Objectives?	Yes
2	Do you support the proposed implementation approach?	Yes
3	Do you have any other comments?	We think that the proposal makes a vital fix to a problem that would otherwise lead to a devastating economic shock to generators and planned projects in high renewables areas like Scotland. In our view such a shock would severely damage investment and set back the UK commitment for Net Zero. It is also very important that any long term solution, after this fix (of undefined duration) deals with the basic flaw in current Locational signals which weighs against renewable generation situated in peripheral areas.
