

Code Administrator Meeting 6 Summary

GC0139: Enhanced Planning-Data Exchange to Facilitate Whole System Planning.

Date: 11 January 2021

Contact Details

Chair:	Rob Pears, National Grid ESO	Rob.Pears@nationalgrideso.com	07866 165540
Proposer:	Ian Povey, Electricity North West	ian.Povey@enwl.co.uk	

Key areas of discussion

- The workgroup came to an agreement following discussions that for the modification to progress a 'Functional Specification' of the description of the model or models required for CIM needs to be drafted. This should be a direct output for the proposed CIM Governance group.
- The workgroup discussed the RFI responses summary produced by MB and concluded that a summary format in word should be circulated for further digestion by the workgroup to ensure alignment of the direction of travel. MB was assigned an action to provide this via circulation by Friday 15 2021.
- Further discussion was had regarding the forecasted costs that had been provided with the RFI responses for handling the proposed implementation of the enhanced data exchange via existing means vs CIM. It was noted that two parties had yet to provide their financial estimates. This discussion came about after a request from the authority to be provided with the estimated figures, to assess whether they align with the findings of the [ENA Open Networks Proposals for Implementation of Electronic Exchange of Network Planning Data](#).
- Discussion around the implications associated with differing frequencies of data exchange in the 'future scenario' of CIM utilisation.
- Discussion regarding the potential timescales for implementation (yet to be confirmed) and incorporating the CIM requirement into the Grid Code.

Next steps

- The workgroup agreed that for two shorter meetings should take place in quick succession between 15th February and 26th February 2020 and a doodle poll for the dates will be shared with the workgroup.

- MB to circulate the RFI responses cost and summary
- Workgroup to review and comment on proposed TOR for the CIM Governance Group
- IP to take the signed off (via circulation by the workgroup) TOR to the ENA to discuss the potential CIM Governance group.
