BSUoS Charge Estimate: £1.15/MWh
Total Outturn: £1.52m

Daily Balancing Costs

■ BM Cost (Indicative)
 ■ AS Cost (Estimate)

Commentary

The market alternated long and short throughout the day. Around 340MW of STOR was run over 9am, 240MW over 2pm, and 162MW over 6pm. Imbalance cash out prices reached a high of £2223/MWh in SP37 due to the Reserve Scarcity Price Function being used in the calculation of the Imbalance price. Interconnector Trades were required for Margin between 5am and 7am. BM Actions alleviated power flow constraints in the North West for the early afternoon. Voltage Control was satisfactory with no intervention required. Overnight BM Actions and Trades to the morning for RoCoF.
