BSUoS Charge Estimate: £3.54/MWh

Total Outturn: £2.68m

BM Cost (Indicative)

AS Cost (Estimate)

Daily Balancing Costs

Commentary

The market was long intermittently during the early hours of the day, over the late morning to midday, and from the early evening until the late night. Interconnector Trades were required for Margin during the morning period. 95MW of Non-BM Fast Reserve was run over 6am in the morning. Trades alleviated thermal import constraints in the South East of England from midday onwards, with BM Action required for this briefly during the morning and in the early evening periods. Overnight Voltage Control requirements were met by the market.
