Commentary

A mostly short market overnight into the late morning, and from early afternoon onwards into the night. Interconnector Trades required for Downward Regulation between 2am and 4am in the morning. Overnight Trades and BM Action supported Voltage Control in the Midlands and South East of England. Trades managed thermal import constraints in the South East of England over the morning to midday period. BM Action was required additionally for this in the early morning and late evening. BM Action alleviated localised thermal export constraints in the Wales area over midday and the early afternoon.
