Commentary

The market alternated long and short, being short mainly over the early morning to midday period. 500MW of Non-BM Fast Reserve was run over the morning, reducing to 200MW by midday. Interconnector Trades were required for Margin between 2pm and 7pm. Overnight Voltage Control was mostly met by the market but still required a few Trades and BM Action in the East of England. BM Action alleviated thermal export constraints in the North of Scotland throughout the day.
