Commentary

A predominantly long market throughout the day, with intermittent short peaks during the morning. 350MW of Non-BM Fast Reserve was run over 10am in the morning. Trades and BM Action supported Voltage Control overnight in the Midlands, North West and South East of England. No action was required additionally for System Inertia. Some BM Action required briefly to manage thermal export constraints in the North of Scotland during the early hours at the start of the day, and for thermal export constraints in the Wales area from 6.30am onwards and into the night.
