

Triads 2023/24

In accordance with the Connection and Use of System Code (CUSC), the Triads for each charging year are calculated and published by National Grid Electricity System Operator using net system demand data (based on the latest available settlement metering) for each half hourly settlement period between November and February inclusive.

The Triads are the three half-hour settlement periods of highest net system demand on the GB electricity transmission system between November and February (inclusive) each year, separated by at least ten clear days. The Triads are used to determine TNUoS demand charges for customers with half hourly meters (see Section 14 of the CUSC).

The Triads for 2023/24 are:

Date	Settlement Period	Net System Demand (MW)
17/01/2024	36	43984
05/12/2023	35	42400
04/01/2024	35	39530

Please see Appendix 1 for details of the half-hour settlement period of highest net system demand for each day between 1st November 2023 and 29th February 2024.

For more information about the Triads, please see our latest guide at this [link](#).

The settlement data run types are Initial Interim (II), Settlement Final (SF), 1st Reconciliation (R1) and 2nd Reconciliation (R2). Subsequent settlement data may change demand, but the triads are not re-calculated after publication. For further settlement data information please consult the Elexon website at <https://www.elexon.co.uk/>.
