## Market Information for Tenders for September 2013

National Grid publishes this information, in order to inform potential participants for the Fast Reserve tender round for September 2013.

### Fast Reserve Availability

Our indicative requirement for Fast Reserve in September 2013 is shown on a Settlement Period basis in Figure 1. This requirement covers weekdays, Saturdays, Sundays and Bank Holidays.

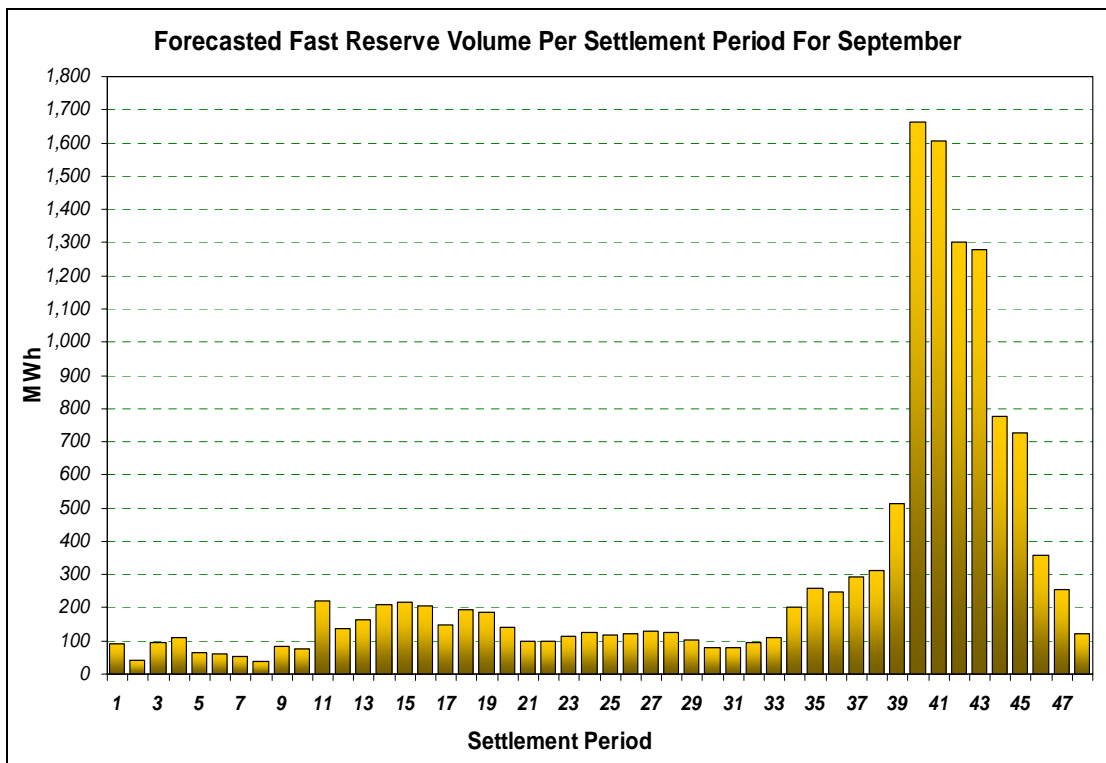

Figure 1

Figure 1 gives an indication of the times of day when Fast Reserve is most useful to National Grid. The actual amount of Fast Reserve "holding" varies from day to day, according to system conditions. In general, it might be good to have around 300 to 400MW of fast reserve service contracted during daytime period.

### Fast Reserve Utilisation

The following BM information is based on the aggregate of Offers plus Bids accepted to provide Fast Reserve or an equivalent service for the last three months. Note that the data for July 2013 contains both out-turn and forecast.

Figure 2 shows the daily utilisation of Fast Reserve in the BM.

Figure 2

Figure 3 represents this data as total utilisation by Settlement Period across each month. This shows the daily profile of Fast Reserve utilisation.

Figure 3

Figure 4 represents the same historical data, as an average utilisation price per Settlement Period for each month.

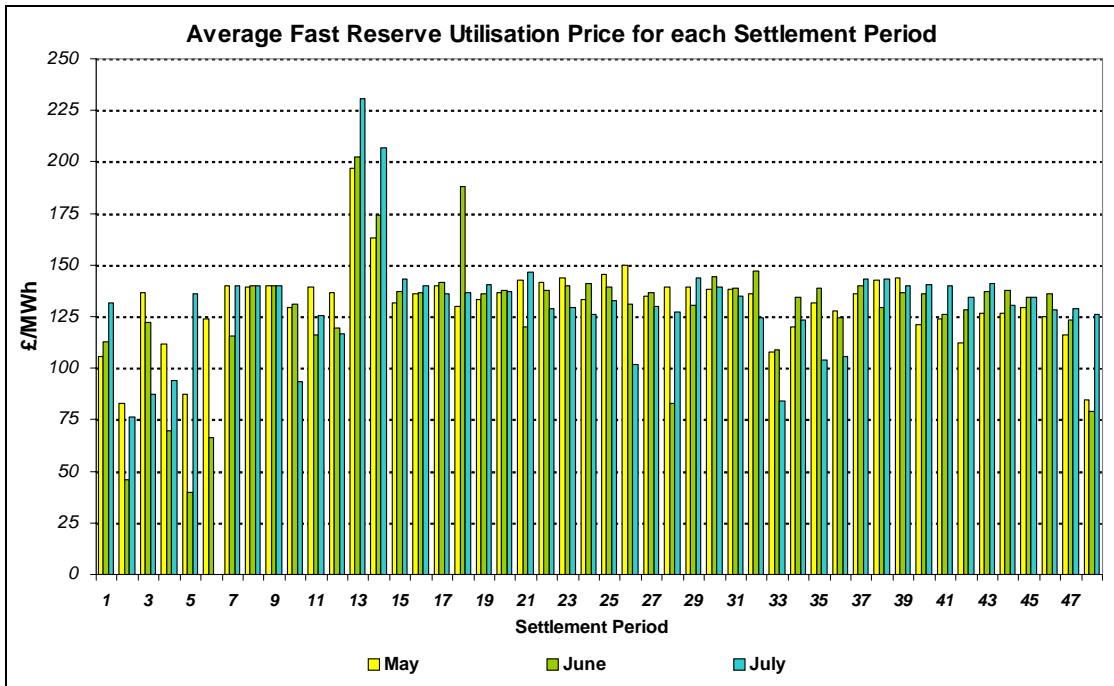

Figure 4

Finally, the same data is used in Figure 5, below, to show the profile of total Fast Reserve utilisation expenditure per Settlement Period for each month.

Figure 5

The total volumes of Fast Reserve utilisation of 17.2 GWh for June 2013 and 13.9 GWh for July 2013, broken down into price bands are as follows:
