

# Revised Special Actions

Audrey Ramsay – Strategy and Constraints Manager  
Electricity Operational Forum – June 2012

# Current Special Action Process

- Special action agreed with all generators for all generator actions required post-fault even when in line with BM parameters.
- All generator Special Actions notified to generators in line with OC2 requirements.
- All generator Special Actions instructed as Emergency Instructions.

## Issues Raised

- Special Actions often no improvement on standard Balancing Mechanism dynamics
- Generators sent notifications of non-Special Actions causing unnecessary administrative burden

## New Process

- No Special Action agreed if BM parameters sufficient to secure transmission faults at planning stage.
- Post-fault actions within submitted BM parameters dispatched by BOA.
- Only generator actions required outside submitted BM parameters will be agreed as Special Actions.
- Agreed Special Actions instructed by Emergency Instruction.
- Emergency Instruction used if expected BM parameters become unavailable and reassessment not possible.

# Q&A
