

Grid Code Workgroup Proposal

Why?

- To develop code modification proposals in an efficient and economic manner, we propose that the majority of Grid Code **Workgroups** and the Grid Code Development Forum (GCDF) take place on a **single day**
- In order to facilitate this change all pre-reading material will be circulated for comment **5 working days prior to the meeting**
- The Code Administrator will provide a Chair and Technical Secretary for the meeting
- The expectation for all Workgroup Members will be to have **completed pre-reading** in order to focus discussion
- The final decision on the composition of the single Workgroup day will be the Grid Code Panel (draft agenda attached in papers)

Please note: the default as suggested is that all Workgroup's will be held on the same day unless justification is provided.

June Workgroup – which mods not included

Work to be progressed outside of Workgroup day

- **GC0036 and GC0079** – no Grid Code changes identified, likely to be re-raised as Distribution Code modifications – discussion due to take place between the Code Administrators
- **GC0097** – due to its cross code dependencies with the BSC we suggest this will continue to progress independently – this has been discussed between the Code Administrators and the Proposer
- **GC0095** – 1 off data exchange workshop completed 7/4/17, otherwise included in single Workgroup day
